CLIENT

The Butler Family

PROJECT TEAM

Strong Design - Interior Design

Dobkin Construction -
General Contractor

The Yard - Landscape Design

CW Howe - Structural for Main House

TYPE

Single Family Residence

SIZE

5898 SF

YEAR COMPLETED

2012

PECK ARCHITECTURE | PECK CIVIL

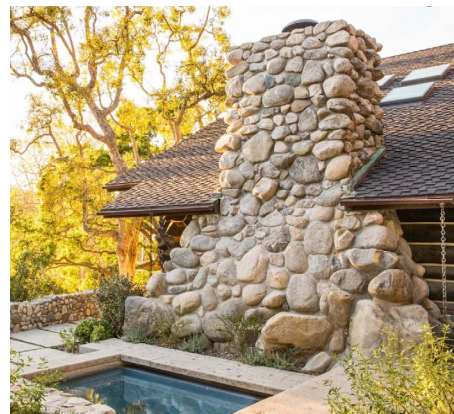

BUTLER RESIDENCE

The project's design success was in equal parts due to the incredible site, a wonderful client, and the amazing history of the Uplifters' Club House.

The original structure was a log cabin with an eclectic wood crafted interior. The structure was in an advanced state of deterioration and although the project was not classified as a historical restoration project, the owners were determined to honor the history of the site and building.

For the site retaining walls, we performed structural engineering. The integration of the house into the hillside was the primary challenge. This involved the resolution of a series of grading structural and code compliance items which interlock like a puzzle.

Our experience with the grading constraints, structural requirements, and zoning code requirements for LA hillside projects helped us create a successful solution.
